Tata Ex Next Generation 15 Accounting Software eldrzos. is an accounting system for small businesses, starting at just R 3,000.

20. I have downloaded the free version of the software and.Q: setTimeout with function I have the following code: function foo() { // do something } foo(); // is this the same as: foo(); setTimeout(function() { foo(); }, 100); I'm trying to understand what it's doing under the hood. It appears that foo(); calls foo immediately, and then setTimeout(function(){...foo();}, 100); doesn't execute foo() twice. Is this correct? A: Yes, this is correct. The first foo() is immediately executed, and the second foo() is deferred (that is, it is not immediately executed, but when the setTimeout handler is executed). The JavaScript specification here in section 11.8.2 is quite explicit about this: The result of a function call, that is, the result value of the function call (as opposed to the result value of the CallExpression used to initiate the function call) is determined as follows: If the FunctionDeclaration or MemberExpression of the CallExpression refers to a FunctionDeclaration, let bound\_name be the Identifier in that FunctionDeclaration, excluding any BindingPropertyIdentifier provided for by this specification. If the FunctionDeclaration or MemberExpression of the CallExpression does not refer to an identifier, there is a candidate FunctionDeclaration associated with the FunctionExpression,... If the CallExpression refers to a function which is not a function declaration, throw a SyntaxError exception. Q: How f678ea9f9e
